

Building an AI-Native Research Department

The Insight Hub

An AI-native, centralized, and dynamic hub that serves as the backbone of research-driven innovation and decision-making

The Insight Hub Architecture

Core Functions

**Industry
Insights**

**Customer
Insights**

Idea Generation

**Thought
Leadership**

Support Functions

**Research
Intelligence**

**Research
Fulfillment**

**Research
Repository**

Core Functions

	Industry Insights	Customer Insights	Idea Generation	Thought Leadership
Description	Comprehensive research that provides a holistic understanding of industries	Primary research to uncover the realities of small businesses across key industries	Uncover and develop new ideas to take into Discovery for validation	Leverage insights to create compelling thought leadership pieces
Output	Industry reports and visual summaries	Small business profiles, product & venture ideas, thought leadership content	A continuously updated idea repository containing categorized and prioritized ideas	High-impact content and facts and figures
Value	Keep company informed about emerging opportunities, threats, and innovation gaps in industries of focus	Provide original insights that give company a competitive edge in the market	Create a market advantage by providing fresh, viable business ideas that align with strategic objectives	Establish company as a thought leader by consistently sharing valuable, research-backed insights
Leveraging AI	Secondary market research, primary research outreach, primary research analysis, automated alerts, research summarization	Primary research outreach, enhanced survey design, primary research analysis, research summarization, document creation	Research summarization, brainstorming, idea refinement, content creation, document creation	Research summarization, personalized insights, knowledge management, topic suggestions, content creation

Support Functions

	Research Intelligence	Research Fulfillment	Research Repository
Description	A central hub for research intelligence	On-demand support for secondary research needs	A centralized, intelligent, and searchable digital repository that consolidates all past primary and secondary research
Output	Core documents including best practices, research sources/tools, and checklists	Tailored deliverables	A database using an AI tool as an interface for queries
Value	Empower teams with the knowledge and resources to conduct efficient, accurate, and impactful research	Deliver research tailored to unique needs and minimize the time teams spend gathering and validating information	Preserve institutional knowledge, facilitate knowledge sharing across teams, enable teams to quickly find and apply research relevant to their projects, and reduce redundancy
Leveraging AI	Knowledge management, source evaluation, tool recommendations, document creation	Secondary market research, research summarization, personalized insights	Research summarization, personalized insights, knowledge management, intelligent indexing

What The Insight Hub Enables

A seven-function AI-native research department

Ongoing industry intelligence across all verticals of focus

A structured ideation process for generating and prioritizing product and venture concepts

A centralized research repository with an AI-powered interface for real-time querying

Thought leadership content connecting research to external audiences

Institutional knowledge preserved and accessible to everyone
