The Right Operational Inefficiency Problem

Small businesses don't fail because they lack documents. They fail because:

Knowledge lives in people, not systems

Docs are created too late, updated too rarely, and used even less

Judgment $\neq$ rules, and most tools pretend everything is a rule

The product should be decision support + just-in-time guidance that happens while work is happening

Jobs to be Done Lens

Core Job:

“Keep the business running without relying on me”

1

Stabilize Execution

Delegation, preventing repeat mistakes, and keeping work consistent across the team

2

Reduce Owner Load

Reduce mental load, stop being the bottleneck, minimize constant questions, and create the ability to step away

3

Preserve Institutional Knowledge

Onboarding new staff, transferring training, and capturing knowledge before it walks out the door

Introducing

Burgundy.

An AI-powered operations partner for small businesses.

Built so you don't have to be everywhere.

Burgundy: Your Operations Partner

When the way the business runs lives in the owner's head, every day feels fragile.

Burgundy is an operations partner that pulls knowledge into the open, seamlessly capturing decisions and workflows as they happen, then delivering guidance to the team in the moments they need it.

The result is fewer dependencies on the owner and a business that scales without burning them out. Because growth shouldn't require being on call forever.
